

colMOOC

Conversational Agents and Learning Analytics in MOOCs

"..colMOOC aims to introduce smart agent-based components in MOOCs to boost learners' engagement, interaction and satisfaction... colMOOC is expected to have impact at local, regional, national, and international levels..."

colMOOC project proposal

Productive peer dialogue is the basis for learners' developing shared deeper understanding. How can we introduce in a MOOC ("Massive Open Online Course") a **competent teacher triggering students' dialogue** online? 'colMOOC' project offers a **teacher configurable conversational agent** which makes smart interventions while peers discuss online. Most important: the learning **benefits have already been documented by our research so far.**

The Erasmus+ Project Results Platform:
<http://ec.europa.eu/programmes/erasmus-plus/projects>

Erasmus+		Key facts and figures	
Field: VET	Participants: 672 directly (>15,000 reached)	Countries: 6	
Action: Strategic Partnerships	EU grant: € 259,466	Project duration: 2014-2016	

The colMOOC project brings **smart technologies in MOOCs** to scale up the benefits of triggering learners' interactions. Nine partners from 5 countries (5 from academia and 3 from industry) join forces to develop **next generation MOOCs.**

We will develop **pilot MOOCs** available in three well-known worldwide MOOC platforms, **explore the impact** of the proposed smart tools on all stakeholders and **advance a "smart learning technologies" agenda in MOOCs** to account for more productive teachers and more satisfied and engaged learners.

Prospective outcomes include:

- 'colMOOC' agent and analytics **components freely available** to integrate in MOOC platforms
- 'colMOOC' **compatible MOOC pilots** to testbed innovative implementation ideas
- 'colMOOC' **research evidence** to document, and further advance our understanding of the impact of smart interventions

colMOOC: the road ahead...

Sustainability: colMOOC project partnership between the universities, the research groups, and the technology-providers will continue after the project through collaborations on MOOCs and further common research projects. Additionally, MOOCs and software tools developed during the project will remain available after the project. The resources developed through the project will continue to be available to the public for at least 3 years after the project completion. The project will also develop a Community of Practice platform, where all stakeholders can communicate, exchange knowledge and expertise, share success stories, etc. as members of a larger EU-wide network.

Short term beneficiaries (during project lifetime)

Follow us on:

Dissemination: ...will be targeted at potential end-users in the public and private sectors, academia, the wider European and International public, TEL industries who may exploit colMOOC. Also publications in high impact journals/conferences, appropriate web media, participation to relevant fairs/exhibitions, workshops, etc.
